Pharmacognosy the study of plants or other natural sources as a possible source of drugs. it is the study of the physical, chemical constituents, biochemical and biological properties, geographical sources of medicinal plants.The word 'pharmacognosy' had its debut in the early 19th century to designate the discipline related to medicinal plants; it is derived from the Greek pharmakon, 'a drug', and gignosco, 'to acquire a knowledge of' and, as recorded by Dr K. Ganzinger \(Sci. Pharm., 1982, 50, 351\), the terms 'pharmacognosy' and 'pharmacodynamics' were probably first coined by Johann Adam Schmidt \(1759-1809\) in his hand-written manuscript Lehrbuch der Materia Medica, which was posthumously published in Vienna in 1811.Schmidt was, until his death, professor at the medico-surgical Joseph Academy in Vienna; interestingly he was also Beethoven's physician. Shortly after the above publication, pharmacognosy appears again in 1815 in a small work by Chr. Aenotheus Seydler entitled Analecta Pharmacognostica.Pharmacognosy is closely related to botany and plant chemistry and, indeed, both originated from the earlier scientific studies on medicinal plants.As late as the beginning of the 20th century, the subject had developed mainly on the botanical side, being concerned with the description and identification of drugs, both in the whole state and in powder, and with their history, commerce, collection, preparation and storage.The scope and practice of pharmacognosyMany crude drugs once generally categorized as herbal remedies are now, in accordance with Continental European practice, described in the British Pharmacopoeia \(BP\).Chromatographic, chemical and physical tests, together with assay procedures, are given for many drugs for which previously there was no quantitative evaluation of the chemical constituents available.Although pharmacognosy is principally concerned with plant materials, there are a small number of animal products which are traditionally encompassed within the subject; these include such items as beeswax, gelatin, woolfat, vitamins, etcVegetable drugs can be arranged for study under the following headings.1. Alphabetic2. Taxonomic.3. Morphologic4. Pharmacological or Therapeutic5.
