RESUME CHEAT SHEET

PHRASES TO USE

- Communication**
 - writes clearly and concisely
 - speaks effectively
 - listens attentively
 - openly expresses ideas
 - negotiates/resolves differences
 - leads group discussions
 - provides feedback
 - persuades others
 - provides well-thought out solutions
 - gathers appropriate information
 - confidently speaks in public
- Organizational Skills**
 - handles details
 - coordinates tasks
 - punctual
 - manages projects effectively
 - meets deadlines
 - sets goals
 - keeps control over budget
 - plans and arranges activities
 - multi-tasks
- Interpersonal Skills**
 - works well with others
 - sensitive
 - supportive
 - motivates others
 - shares credit
 - counsels
 - cooperates
 - delegates effectively
 - represents others
 - understands feelings
 - self-confident
 - accepts responsibility
- Management Skills**
 - leads groups
 - teaches/trains/instructs
 - counsels/coaches
 - manages conflict
 - delegates responsibility
 - makes decisions
 - directs others
 - implements decisions
 - enforces policies
 - takes charge
- Research and Planning**
 - forecasts/predicts
 - creates ideas
 - identifies problems
 - meets goals
 - identifies resources
 - gathers information
 - solves problems
 - defines needs
 - analyzes issues
 - develops strategies
 - assesses situations

ACTION WORDS

- | | | | |
|-------------|----------------|--------------|--------------|
| • advises | • establishes | • improves | • oversees |
| • compiles | • examines | • influences | • prepares |
| • critiques | • generates | • invents | • recruits |
| • coaches | • guides | • motivates | • resolves |
| • designs | • hypothesizes | • negotiates | • supervises |
| • directs | • illustrates | • orders | • trains |
| | | | • upgrades |

WORDS TO AVOID

- | | |
|------------------------|----------------------------|
| • tries | • objectives |
| • references available | • responsibilities include |
| • upon request | • loves |

FONTS TO USE

| | Trebuchet MS |

Love It Loved on: www.businessnewsdaily.com/6391-the-only-resume-cheat-sheet-you-will-ever-need.html?cmpid=514624_20140520_24203274 Previous Next Report image Advertisement LoveThisPic is a place for people to come and share inspiring pictures, quotes, DIYs, and many other types of photos. The user 'Timfly' has submitted the Resume Cheat Sheet picture/image you're currently viewing. You have probably seen the Resume Cheat Sheet photo on any of your favorite social networking sites, such as Facebook, Pinterest, Tumblr, Twitter, or even your personal website or blog. If you like the picture of Resume Cheat Sheet, and other photos & images on this website, please create an account and 'love' it. This will save the Resume Cheat Sheet to your account for easy access to it in the future. We hope you enjoy this Resume Cheat Sheet Pinterest/Facebook/Tumblr image and we hope you share it with your friends. Incoming search terms: Pictures of Resume Cheat Sheet, Resume Cheat Sheet Pinterest Pictures, Resume Cheat Sheet Facebook Images, Resume Cheat Sheet Photos for Tumblr. PM2 is a daemon process manager that will help you manage and keep your application online. Getting started with PM2 is straightforward, it is offered as a simple and intuitive CLI, installable via NPM. Installation The latest PM2 version is installable with NPM or Yarn: \$ npm install pm2@latest -g # or \$ yarn global add pm2 To install Node.js and NPM you can use NVM Start an app The simplest way to start, daemonize and monitor your application is by using this command line: Or start any other application easily: \$ pm2 start bashscript.sh \$ pm2 start python-app.py --watch \$ pm2 start binary-file -- --port 1520 Some options you can pass to the CLI: # Specify an app name --name # Watch and Restart app when files change --watch # Set memory threshold for app reload --max-memory-restart # Specify log file --log # Pass extra arguments to the script -- arg1 arg2 arg3 # Delay between automatic restarts --restart-delay # Prefix logs with time --time # Do not auto restart app --no-autorestart # Specify cron for forced restart --cron # Attach to application log --no-daemon As you can see many options are available to manage your application with PM2. You will discover them depending on your use case. Managing processes Managing application state is simple here are the commands: \$ pm2 restart app_name \$ pm2 reload app_name \$ pm2 stop app_name \$ pm2 delete app_name Instead of app_name you can pass: all to act on all processes id to act on a specific process id Check status, logs, metrics Now that you have started this application, you can check its status, logs, metrics and even get the online dashboard with pm2.io. List managed applications List the status of all application managed by PM2: Display logs To display logs in realtime: To dig in older logs: Terminal Based Dashboard Here is a realtime dashboard that fits directly into your terminal: pm2.io: Monitoring & Diagnostic Web Interface Web based dashboard, cross servers with diagnostic system: Cluster mode For Node.js applications, PM2 includes an automatic load balancer that will share all HTTP(S)/Websocket/TCP/UDP connections between each spawned processes. To start an application in Cluster mode: \$ pm2 start app.js -i max Read more about cluster mode here. Ecosystem File You can also create a configuration file, called Ecosystem File, to manage multiple applications. To generate an Ecosystem file: This will generate an ecosystem.config.js file: module.exports = { apps : [{ name: "app", script: "./app.js", env: { NODE_ENV: "development", }, env_production: { NODE_ENV: "production", } }], { name: 'worker', script: 'worker.js' }] } And start it easily: Read more about application declaration here. Setup startup script Restarting PM2 with the processes you manage on server boot/reboot is critical. To solve this, just run this command to generate an active startup script: And to freeze a process list for automatic respawn: Read more about startup script generator here. Restart application on changes It's pretty easy with the --watch option: \$ cd /path/to/my/app \$ pm2 start env.js --watch --ignore-watch="node_modules" This will watch & restart the app on any file change from the current directory + all subfolders and it will ignore any changes in the node_modules folder --ignore-watch="node_modules". You can then use pm2 logs to check for restarted app logs. Updating PM2 We made it simple, there is no breaking change between releases and the procedure is straightforward: npm install pm2@latest -g Then update the in-memory PM2 : CheatSheet Here are some commands that are worth knowing. Just try them with a sample application or with your current web application on your development machine: # Fork mode pm2 start app.js --name my-api # Name process # Cluster mode pm2 start app.js -i 0 # Will start maximum processes with LB depending on available CPUs pm2 start app.js -i max # Same as above, but deprecated. pm2 scale app +3 # Scales 'app' up by 3 workers pm2 scale app 2 # Scales 'app' up or down to 2 workers total # Listing pm2 list # Display all processes status pm2 jlist # Print process list in raw JSON pm2 prettylist # Print process list in beautiful JSON pm2 describe 0 # Display all informations about a specific process pm2 monit # Monitor all processes # Logs pm2 logs [-raw] # Display all processes logs in streaming pm2 flush # Empty all log files pm2 reloadLogs # Reload all logs # Actions pm2 stop all # Stop all processes pm2 restart all # Restart all processes pm2 reload all # Will 0s downtime reload (for NETWORKED apps) pm2 stop 0 # Stop specific process id pm2 restart 0 # Restart specific process id pm2 delete 0 # Will remove process from pm2 list pm2 delete all # Will remove all processes from pm2 list # Misc pm2 reset # Reset meta data (restarted time...) pm2 updatePM2 # Update in memory pm2 pm2 ping # Ensure pm2 daemon has been launched pm2 sendSignal SIGUSR2 my-app # Send system signal to script pm2 start app.js --no-daemon pm2 start app.js --no-vizion pm2 start app.js --no-autorestart What's next? Learn how to declare all your application's behavior options into a JSON configuration file. Learn how to do clean stop and restart to increase reliability. Learn how to deploy and update production applications easily. Monitor your production applications with PM2.io. Install the latest pm2 version: npm install pm2@latest -g Then update the in-memory PM2 : Contribute to this page
